To: Marketing Department

From: Scenario 1 Team

Subject: Summary of IHH Healthcare Sustainability Report 2024

Date: 10 May 2026

This memorandum encapsulates the principal sustainability elements from IHH Healthcare's 2024 report. IHH Healthcare integrates sustainability into its overarching mission of "Care. For Good.", emphasising financial success with the well-being of patients, personnel, the community, and the environment. The organisation emphasises its position as a healthcare provider dedicated to delivering exceptional treatment and generating long-term value for stakeholders.

A significant feature highlighted in the report is IHH Healthcare's emphasis on enhancing patient care via quality metrics and digital accessibility. In 2024, the organisation augmented the quantity of value-driven outcomes quality indicators from 113 to 202, demonstrating enhanced oversight of healthcare quality. Over 8 million patients acquired online access to their medical records, enhancing ease, transparency, and patient empowerment. IHH also invested in innovations including AI-driven technologies for sleep disorder identification and AI video analytics to avert patient falls.

The report demonstrates a robust commitment to employees. IHH documented almost 1.2 million training hours in 2024, indicating a commitment to employee development. The organisation recorded a 14% growth in its nursing talent pool relative to its 2022 baseline and attained 49% representation of women in leadership positions. These accomplishments help reinforce the marketing narrative that IHH prioritises professional development and workplace inclusivity.

IHH has made advancements in mitigating its environmental impact. The organisation attained a 3.2% decrease in emissions intensity per patient bed day and almost a 90% reduction in single-use virgin plastics in non-clinical sectors spanning Malaysia, Türkiye, Singapore, and Hong Kong. IHH has decreased desflurane utilisation by as much as 55% in key markets, which is significant due to desflurane's classification as a greenhouse gas employed in healthcare environments.

The Marketing Department finds it most beneficial to convey that IHH Healthcare's sustainability initiatives are linked to tangible healthcare outcomes. The organisation can convey its strengths through themes such as patient-centred care, digital innovation, employee development, diversity, and environmental stewardship. These principles are appropriate for effective and professional marketing communication

since they portray IHH as a responsible healthcare organisation that harmonises expansion with social and environmental accountability.

Thank you.

Kind regards,

Ereen Shamimi Samrih
